ISLE OF MAN INFLATION

SEPTEMBER 2021

KEY POINTS FOR SEPTEMBER 2021

CONSUMER PRICES INDEX

5.0%

CONSUMER PRICES INDEX (CPI)

The annual rate of inflation as measured by CPI for September 2021 is 5.0%, this is a increase of 1.9% on the previous month August 2021.

Inflation as measured by Consumer price index stands at 5.0% for September 2021, up from 3.1% in August 2021. Note that this rate for August is different from that originally reported and represents a correction to the data. A correction has also been made to the rate of inflation for July—please see table 3 for further details.

Transport, Housing, water, electricity, gas and other fuels and Furniture, household equipment and maintenance are the three biggest contributors to the increase in the rate of inflation. Each contributes to a 3.8%, 0.6% and 0.4% increase in the overall 12-month rate respectively.

All items within Transport category experienced an increase in prices. Air travel experienced the biggest increase in prices (68.0%), followed by petrol and oil (17.1%). Within Housing, water, electricity, gas and other fuels, oils and other fuels experienced the biggest increase in prices (46.1%) compared to same month last year. Within Furniture, household equipment and maintenance, other household equipment experienced the greatest increase in prices (13.8%) compared to September 2020.

Note:- The annual average inflation rate is the change in the annual average index from the year before. This need not be the same as the average of the inflation rates for January to December but in practice the difference is small. As with CPI the rates of inflation reported here differ from those originally reported. The rates of inflation reported in July and August were 2.8 and 1.3 respectively.

ISLE OF MAN INFLATION

METHODOLOGY

METHODOLOGICAL NOTES

Inflation measures the increase in the cost of living, expressed through the prices paid for goods and services by an average household.

A "basket" of goods has been compiled based on the results of the Household Income and Expenditure Survey 2013. The relevant importance of each item is taken into account by weighting products according to the average expenditure on each.

Combining the movements in all the prices together results in an index value and movements in that index value represent an inflation rate; usually expressed as a percentage increase over the previous year. For example, if an annual rate of inflation is given as 5%, then this means something like: "over the last 12 months, the total cost of goods and services consumed by the average household has increased by 5%".

Currently in the Isle of Man, around 1,000 prices are collected for some 500 items. These prices are collected by the staff of Statistics Isle of Man by a combination of: mailing out forms to be filled in by participating businesses, personal visits to premises, telephone contacts, and browsing online shopping sites. Approximately one hundred retailers and other organisations help by either supplying price information or allowing access to their premises. Prices are collected on the 17th/18th of every month (or the nearest working day if this falls on a weekend).

Change to the calculation of the Retail Price Index

As announced in January 2018, April 2018 was the first month where the methodology for the Retail Price Index changed.

The change to the Retail Price Index relates to the formula which is used to create the index, which has changed from the Carli formula to the Jevons formula. This is the same formula which is used in the creation of the Consumer Price Index. However the basket of goods and services and the weightings used in the Retail Price Index will remain the same.

In order to enable comparisons with the United Kingdom's RPI, a comparison chart which takes into account the 'formula effect' is provided below and will be provided each month:

UK RPI (September 2021)	4.9%
Estimated Formula Effect:	-1.09%

Adjusted UK RPI: 3.81%

This data can be sourced from Table 1 and Table 5 of the ONS Inflation Data release:
